

Curriculum

CSEngineering's Skillbridge program is designed to be customizable dependent on the service member's preferred length, work background, translatable skills, interests and career goals for post-military life. While our current options are geared to individuals wishing to learn about DevSecOps and Program Management, we have a high degree of flexibility intended to provide the service member with the opportunity to select and/or develop an internship path that we can accommodate, develop, and execute based on need. All internships can accommodate candidates from junior level to subject matter experts, and will include a component for post-separation job searching (interviewing, resume review, etc.).

Soft Skills

- Ability to problem solve
- Self-Discipline
- Independent and Team based work
- Multi-Tasking/Prioritization
- Corporate world working experience
- Interview skills and practice
- Overview of corporate business practices
